

**Education****College/University:**

Friedrich-Schiller University of Jena

**Highest degree:**

Dipl. Biochemist

**Major Subjects:**

Biochemistry, Molecular Biology, Molecular Medicine

**First name:**

**Franziska**

**Last name:**

**Greulich**

**Date of birth:****Country:**

**Germany**

**E-mail:**

**Franzi.Greulich@  
googlemail.com**

**Supervisor:**

**Prof. Kispert  
Molecular Biology**

**Projects/Research:**

The role of T-box transcription factor 18 (Tbx18) in murine heart development at the institute for molecular biology at the MHH.

**Scientific Interests and Goals:**

Every researchers dream is to cure all diseases of the world and to understand nature. Of course, that is also my dream but I realized that is out of my power. So I am concentrating on heart development to understand developmental disorders as well as to learn from nature and maybe sometime I will find the way to heal some of the heart disease or even be able to regenerate a heart (or at least parts of it).

**Hobbies and other interests:**

Cooking, travelling, sports (Volleyball, running especially very early in the morning), reading (due to lack in time: audio book listening)
